SQL Machine Test

Batch: Jan/Feb/March-26 Batch **Date: 28/10/2026**

Instructions:

1. **Solve any 10 questions.**

1. **Members Table :-**

Column Name	Data Type	Constraint
member_id	INT	Primary Key
member_name	VARCHAR(50)	NOT NULL
city	VARCHAR(50)	—
join_date	DATE	—
membership_type	VARCHAR(20)	—

2. **Books Table :-**

Column Name	Data Type	Constraint
book_id	INT	Primary Key
book_name	VARCHAR(100)	NOT NULL
author	VARCHAR(50)	—
category	VARCHAR(40)	—
price	DECIMAL(8,2)	—

3. **BorrowRecords :-**

Column Name	Data Type	Constraint
borrow_id	INT	Primary Key
member_id	INT	Foreign Key → Members(member_id)
book_id	INT	Foreign Key → Books(book_id)
borrow_date	DATE	—
return_date	DATE	NULL allowed

Q1. Write a query to display each member's name, book name, author, borrow date, and return date. Include only members who have borrowed at least one book.

Q2. Display the details of members who have never borrowed any book from the library.

Q3. Display each book's name and total borrowing count for books borrowed more than once. Sort the result by borrowing count in descending order.

Q4. Display the names of members whose total number of borrowed records is greater than the average number of borrowed records per member. Include members with zero borrowings when calculating the average.

Q5. Display the book name, category, and price of books whose price is greater than the average price of books in the same category.

Q6. Find members who have borrowed every book belonging to the Programming category at least once.

Q7. Create a view named CurrentBorrowedBooks displaying member name, book name, borrow date, and membership type for records where the book has not yet been returned. Write a query to retrieve all records from this view.

Q8. Create a view named MemberBorrowingStats that displays every member's ID, name, total borrowed books, and total currently unreturned books. Members without borrowing records must also appear.

Q9. Create a stored procedure named GetMemberBorrowingHistory that accepts a member ID as input and displays the member's name, book names, borrow dates, and return dates. Execute the procedure for member ID 1.

Q10. Create a stored procedure named GetActiveMembers that accepts a minimum borrowing count as an input parameter and displays members whose total borrowing count is greater than or equal to that value. Include member name, city, and total borrowing count. Execute it with a minimum count of 2.

Q11. Find members who have borrowed at least one book from every category available in the Books table.

Q12. Find the book or books with the second-highest borrowing count. Display the book name and borrowing count. Handle ties without using LIMIT.

-----ALL THE BEST-----
